JodyJazz[®] Announces the Launch of the Innovative New QUASAR Alto Saxophone Mouthpiece

Savannah, GA.....JodyJazz Inc., a global leader in premium saxophone mouthpieces, is proud to announce the launch of the new QUASAR Alto Saxophone Mouthpiece, a groundbreaking new hard rubber model that represents the next generation of power, projection, tonal brilliance, and responsiveness for Alto saxophonists.

"A celestial Quasar is the brightest object in the universe, releasing immense amounts of energy. With the new QUASAR Alto, we set out to create a hard rubber mouthpiece that delivers unprecedented brightness and projection without sacrificing the richness and warmth that players love," said Jody Espina, Founder and President of JodyJazz. "The QUASAR gives players a completely new option in our Alto lineup, and I believe this new mouthpiece will empower players in ways they've never experienced previously."

The QUASAR is the brightest and most powerfully projecting hard rubber Alto mouthpiece JodyJazz has ever created. Designed for today's demanding performance environments, ranging from contemporary jazz and fusion to commercial and pop settings, the QUASAR delivers exceptional cut and clarity while retaining the depth and body that players expect from JodyJazz mouthpieces.

Importantly the new QUASAR model introduces several brand-new innovations to JodyJazz's acclaimed design philosophy. At the heart of this new design is the new 'Vibra Table' (Patent Pending), a groundbreaking table design that significantly increases reed vibration. The result is an incredibly free-blowing experience, allowing players to produce a bigger, more resonant tone with less effort and greater responsiveness across all registers.

Another major advancement is a new bullet-shaped chamber, meticulously engineered to add exceptional body and fullness to the sound, bringing together brilliance and warmth in a way no hard rubber JodyJazz mouthpiece has achieved before. This chamber design brings an entirely new voice to the JodyJazz range, one that offers both brilliant presence and a robust low-end foundation.

Another key innovation is the newly developed Facing Curve, expertly crafted to make the altissimo register easier, more reliable, more stable and more expressive, giving players improved control and access to expanded range and extended expressive capabilities.

“The innovative new ‘Vibra Table’ design, new chamber shape and new facing curve represent some of our most significant design advancements to date,” Espina continued. “We’re excited to introduce this new voice to the market.”

The JodyJazz QUASAR Alto Saxophone Mouthpiece is available in tip openings 6, 7, 8, and 9* and will have an MSRP of \$350.00

The QUASAR Altos will be available to ship to Dealers during the first week of February 2026.

JodyJazz[®] Adds New Tenor Sax Model to Award-Winning DV JC JODY CUSTOM Series

Savannah, GA..... JodyJazz[®] is proud to announce the launch of the new DV JC JODY CUSTOM Tenor Saxophone Mouthpiece, the highly anticipated Tenor edition of the award-winning DV JC JODY CUSTOM Alto model. Introduced last year, the DV JC JODY CUSTOM Alto was recently selected as the "Best New Product of the Year" in the Woodwinds Category at the 2025 Music China Shanghai Show. The annual Best New Product Awards, presented by the Music China Organizing Committee, recognize outstanding innovation, design, and craftsmanship in the global musical instrument industry. Building upon that acclaimed success, the new DV JC JODY CUSTOM Tenor will now bring the same spirit of innovation and performance excellence to Tenor saxophonists worldwide.

The DV JC JODY CUSTOM Tenor is based directly upon JodyJazz Founder & President Jody Espina's own personal, custom-modified DV Tenor mouthpiece, refined over years of professional performance across diverse musical genres. Originally introduced in 2005, the DV Series quickly became one of the most acclaimed and best-selling saxophone mouthpiece lines in the world. The hallmark DV design offered unprecedented free-blowing power and projection while retaining a rich mid-range and resonant bottom end typically absent in metal mouthpieces.

Over the years, Espina continually refined his personal DV Tenor mouthpiece to better meet the broad musical demands of his performing career. Now, for the first time, that unique and highly specialized design is being offered to saxophonists everywhere.

“As with the Alto model, the DV JC Tenor is the result of countless small refinements to my personal DV Tenor that accumulated over many years,” says Espina. “I needed a Tenor mouthpiece that could do everything, warm and lush for ballads, powerful and clear for contemporary music, and flexible enough for all the situations I find myself in as a working musician. The DV JC JODY CUSTOM Tenor offers a special balance of warmth, power, and versatility that I think players are really going to respond to.”

Like its Alto counterpart, the DV JC Tenor occupies a sonic space between the DV and DV NY models, but with a distinctive character of its own. Its hand-finished design provides exceptional resonance and immediacy, while offering a surprisingly warm, almost non-metal feel, both in tone and response.

The DV JC JODY CUSTOM Tenor is handcrafted in the USA from 14kt gold-plated virgin bell brass and is available in tip openings 6, 7, 7* & 8*. Its MSRP will be \$675.00 which is the same as the other standard DV, DV CHI and DV NY Tenor models.

The DV JC JODY CUSTOM Tenors will be available to ship to Dealers during the first week of March 2026.

JodyJazz Introduces New POWER RING[®] Ligatures in Palladium Finish

Savannah, GA..... JodyJazz[®] has expanded the selection of its innovative and popular POWER RING Ligatures with the introduction of the new Palladium Matte finish option. The new POWER RING Ligatures in Palladium Matte finish have been developed to complement JodyJazz's increasingly popular SUPER JET range of saxophone mouthpieces. They are available in all four sizes to match the SUPER JET Soprano, Alto, Tenor and Baritone models.

The SUPER JET mouthpieces have steadily grown in popularity over the past 24 months and now stand amongst JodyJazz's best-selling models worldwide. These new matching POWER RING Ligatures feature the same Palladium Matte finish as the SUPER JET mouthpieces. Palladium is a very durable precious metal known for being very strong and tarnish resistant. It is harder than gold and silver and more resistant to scratches.

The JodyJazz POWER RING Ligatures provide an elegant solution to the problem with ligatures that dampen vibration of the reed. POWER RINGS feature a concave inner design which reduces the touch points on the reed thereby maximizing reed vibration. There are no moving or added parts, thereby further increasing the efficiency of vibration. Because the POWER RINGS allow the most freedom and vibration of the reed, this in turn increases the amount of harmonics present, allowing the fullest clarinet sound containing high, mid and low frequencies.

JodyJazz POWER RING Ligatures are packaged in an attractive box that features a QR code that provides a direct link to JodyJazz's "POWER RING Ligature Fit Charts". These charts provide a comprehensive guide to help players find the right POWER RING Ligature that fits their mouthpiece.

Individually CNC machined from virgin brass at the JodyJazz factory in Savannah, GA, all JodyJazz POWER RING Ligatures, come packaged with a matching cap included. They have an MSRP of \$110.00.
